

TECHNICAL INFORMATION ABOUT THE COMBINAISON ROBOT / AUTOMATE

Combination of an automate and a robot = has the features and benefits of 2 technologies + some special features described below:

MAIN THEME	SECONDARY THEME	DETAILS
INPUTS AND STOCK MANAGEMENT		Automatic creation / cancellation of channels according to rotation
	INVENTORY	Complete physical inventory of its shelves and automate channels performed by the robot (laser telemetry system)
	AUTOMATIC OPTIMIZATION	Reorganization of products placement according to their rotation
STORAGE	AUTOMATIC	Via the loading door, the robot stores the products in the shelves and in the Automate channel
		Priority given to the delivery of the order. The robot then returns to its original task (storage, inventory, etc.)
DELIVERY		Order for Automate products only: speed identical to a pure Automate. If the shelves contain stocks, then automatic filling channels by the robot during his free time.
		Mixed order (robot + automate): The order requires the picking of at least one product contained on the shelves of the robot. During this time, if only automate orders are asked, they are immediately prepared and delivered. When the robot has finished picking on its shelves, the order returns priority and the products of the "robot + automate" command are delivered simultaneously (no waste of time).
TRACEABILITY		Package management in FEFO process
